ReBUILDetroit Summer Research Experience 2019

Program Expectations for Scholars:

- Summer placement will be on a full-time basis. Scholars are expected to be available to participate in mentored research 37.5-40 hours/week for 8-weeks from May 20 - July 12, 2019. Actual day-to-day schedules are to be agreed upon by the mentor and the scholars. Scholars are expected to uphold the agreement made between you and your mentor.
- Scholars are compensated with NIH BUILD grant funds. Students are not required to submit timesheets. If there are ever any concerns about attendance/participation mentors and/or scholars are encouraged to contact ReBUILD for clarification.
- We allow students to take a course during the summer and in that case if course work takes the students out of the lab for a significant period of time the expectation is that they “make-up” the time by staying on for additional time. We encourage our students to stay involved year-round if their academic schedules allow them to do so and the mentor and trainee mutually agree to continue working together.
- Attend professional development events (described below)

Supply Funds:

- There are $500 in funds available/student for the cost of research-related supplies or expenses
  - Common uses: Lab consumables, IRB for on-campus facility or stockroom, software license
  - Please complete this form to request supplies: https://forms.wayne.edu/5ce62ca99d3ff/
  - If you have questions please contact rebuild_faculty@wayne.edu

2019 SRE Key Dates (SRE):
May 13-May 17: First-Year Research Orientation on WSU Campus
May 20: Scholars report to research groups
July 12: Final official program day in research groups
July 16: BUILD SRE Poster Session at University of Detroit Mercy

End of summer deliverables:

- Research Poster
  - BUILD will cover poster printing costs and arrange for printing.
  - Poster title and authors must be submitted by Friday, July 9.

- Research Report, due July, 19, 2019:
  - Scholars are expected to generate their reports and receive approval from mentors on final version.
  - Scholars should work with research mentor to meet deadline.
  - We are aware that it in many instances there will not be substantial project results at the end of the 8-week period and that the project will likely be a “work-in-progress”. In those cases, the end of summer reports should focus on the introduction, methodology, preliminary results and future directions of the project.
